

***The SECME Summer Institute Experience begins before you walk in the door...***

SECME designs its professional development opportunity to bring together the “best of the best” in their fields of expertise:

- From the classroom, SECME Master Teachers provide hands-on, standards-based teaching strategies;
- From Clemson University’s College of Engineering and Science, School of Education, and Diversity Office provide you with cutting-edge learning and teaching experiences, as well as unique perspectives on equity and inclusion initiatives;
- From SECME Member Universities and Corporate Partners, experts provide advanced K-12 inquiry-based STEM best practice and research innovations;
- And from peers in the classroom and in leadership positions, fellow professionals provide networking with like-minded, dynamic educators from across the country.

Where else over a week’s time can you be energized – and encouraged to “stay in touch”—by SECME Master Teachers, university faculty, and industry engineering experts from the likes of NASA, Pratt & Whitney, and SAE International...just to name a few?
